10. ADD A TABLE

We're going to change our My Favourite Books page so that it shows a table listing our top five books and showing marks out of ten for each of the books. Here's how it will look:

1. Start by adding the following selectors to your **simple.css** file:

```css
tr {
        background-color: silver;
}

th, td {
        vertical-align: top;
        padding: 0.5em;
        text-align: left;
}
```

Add the table to your **books.html page**. Here is some code to get you started:

```
<body>
        <ul class="menu">
                <li><a href="index.html">Home</a></li>
                <li><a href="about-me.html">About Me</a></li>
                <li><a>My Favourite Books</a></li>
                <li><a href="family.html">My Family</a></li>
                <li><a href="pets.html">My Pets</a></li>
        </ul>
        <h1>My favourite Books</h1>
        <h2>Epic Books</h2>
        <p><img src="images/HarryPotter.png" width="500"/></p>

        <h2>Top Three Books</h2>
        <table>
                <tr>
                        <th>Position</th>
                        <th>Name</th>
                        <th>Rating</th>
                </tr>

        </table>

</body>
```

Add this new block of code

Your page should look a bit like this:

Home   About Me   My Favourite Books   My Family   My Pets

My favourite Books

Epic Books

Top Three Books

Position   Name   Rating

Now add the first row of data to your table:

```
<h2>Top Three Books</h2>
<table>
        <tr>
                <th>Position</th>
                <th>Name</th>
                <th>Rating</th>
        </tr>
        <tr>
                <td>1</td>
                <td>Harry Potter</td>
                <td>9/10</td>
        </tr>
</table>

</body>
```

Table data

tr stands for table row

th stands for table heading

td stands for table data

Your page should look a bit like this:

Home	About Me	My Favourite Books	My Family	My Pets

My favourite Books

Epic Books

Harry Potter

Top Three Books

Position	Name	Rating
1	Harry Potter	9/10

Now add the other rows – you can have more than three book on your list if you want.

Epic Books
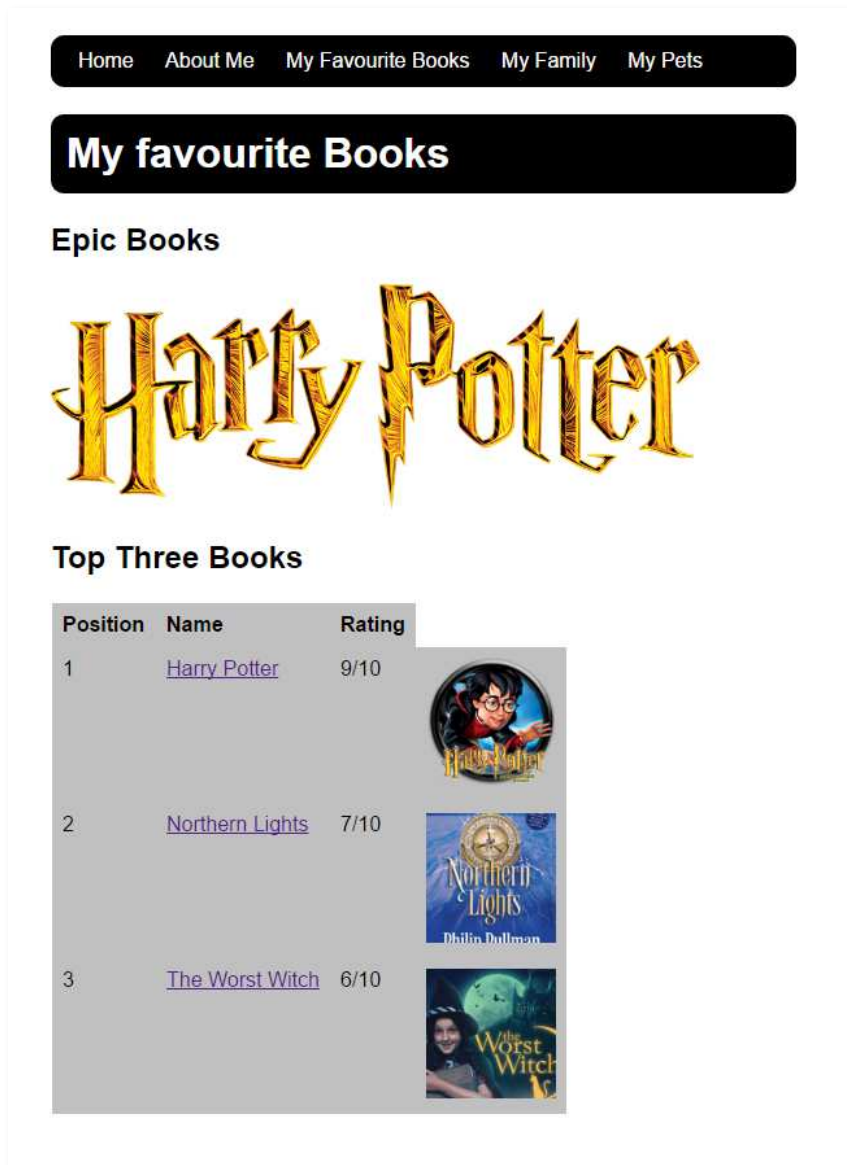

Top Three Books

Position	Name	Rating
1	Harry Potter	9/10
2	Northern Lights	7/10
3	The Worst Witch	6/10

CHALLENGES!

- Can you add a column showing icons for each of the games?
  Tip- you can use this website to find images: www.googlejunior.com

- Can you make the name of the book into a link to buy it?

One more tag!

Try using the marquee tag to make text move across the screen like this:
<marquee>Epic Books!</marquee>

Congratulations! You've created your first website!
