8. IDENTIFY THE MENU

I we have a second unordered list within our page it will be formatted in the same way as the top menu – unless we can distinguish between them.

The web page below shows what it looks like when you add a second unordered list to the page.

We need to identify the menu by giving it a class attribute. **<ul class="menu"> ... ** Once we have done this we can modify the CSS stylesheet so that the menu formatting rules are only applied to the **ul** elements which have a **class** selector with a value of **menu**. Here's how:

File – **family.html**
Menu code before editing:

```
<body>
        <ul>
                <li><a href="index.html">Home</a></li>
                <li><a href="about-me.html">About Me</a></li>
                <li><a href="books.html">My Favourite Books</a></li>
                <li><a>My Family</a></li>
                <li><a href="pets.html">My Pets</a></li>
        </ul>

        <h1>My Family</h1>
        <h2>I have three sisters and one brother:</h2>

        <ul>
                <li><a>Anne Marie</a></li>
                <li><a>Irene</a></li>
                <li><a>Brenda</a></li>
                <li><a>Daniel</a></li>
        </ul>
```

Unordered list - Menu

Second Unordered list

File – **family.html**
Menu code after editing:

Add:

<ul class="menu">

```
<body>
        <ul class="menu">
                <li><a href="index.html">Home</a></li>
                <li><a href="about-me.html">About Me</a></li>
                <li><a href="books.html">My Favourite Books</a></li>
                <li><a>My Family</a></li>
                <li><a href="pets.html">My Pets</a></li>
        </ul>

        <h1>My Family</h1>
        <h2>I have three sisters and one brother:</h2>

        <ul>
                <li><a>Anne Marie</a></li>
                <li><a>Irene</a></li>
                <li><a>Brenda</a></li>
                <li><a>Daniel</a></li>
        </ul>
```

This will not make any changes to your web page until we apply the rules to the CSS code:

File – **simple.css**

```css
ul.menu {
        border-style: solid;
        border-width: 1px;
        padding: 10px;
        border-radius: 10px;
        background-color: black;

}
ul.menu li {
        list-style-type: none;
        display: inline;
        margin-right: 10px;
        margin-left: 10px;
}
ul.menu li a {
        color: white;
        text-decoration: none;
}

ul.menu li.selected {
        color:yellow;
}

ul.menu li a:hover {
        color: #99DDFF;
        text-decoration:underline;
}
```

Change:

ul to ul.menu

How the web page should look now:

Home   About Me   My Favourite Books   My Family   My Pets

My Family

I have three sisters and one brother:

- Anne Marie
- Irene
- Brenda
- Daniel

Notice the second unordered list has gone back to its original (bullet point) format

I am the oldest

A picture of me with my brother and sisters

You will now need to add the attribute <ul class="menu"> to all your other pages:
